Texas Textile realizes the economic times that the healthcare industries are currently presented with in the United States. In order to aid our customers **Texas Textile is now offering its customer Level Invoicing** on any negative variance loss linen invoices.

Based on your facilities annual poundage and historical loss linen invoices Texas Textile will establish a penny per pound charge that will be invoiced to your facility weekly as a line item along with your weekly poundage invoice.

Texas Textile would like to meet with your facility's management/administration at your earliest convenience to review your individual hospital's historical annual linen loss invoices and present an addendum to our agreement extending the terms and conditions for payments of negative variance loss linen invoices.

Texas Textile feels that this Level Invoicing for loss linen will aid the hospital in budgeting and will eliminate fluctuation in loss linen invoices. There will be no additional finance charges for the extended terms. If a facility exceeds its historical penny per pound average replacement the facility will have the option to pay the difference through its established 30 day terms or a pro-rated penny per pound adjustment based on annual poundage could be re-established.

Texas Textile's Level Invoicing is an extension to its financial terms with the hospitals. It does not change any contractual agreement or systems nor does it change hospitals 30 day net invoicing terms.

Texas Textile's Level Invoicing System means that if a hospital manages its linen under its historical loss linen history Texas Textile will give a credit at the end of the annualized poundage pro-rated amount. Texas Textile's Level Invoicing is not like our competitors EEC charge which is an automatic replacement regardless of the hospitals efforts in managing its linen inventory rotation and losses. These charges are never credited back to the hospital nor do they represent actual losses for the individual hospital.

Thank You
